**We support  
Trailblazers**

# OneFile supports the delivery of Trailblazer Apprenticeships

These are some of the features our Trailblazer customers are making the most of:

- Interactive employer accounts
- Recording Trailblazer progress against the standard
  - Bespoke standards
  - Customisable terminology
  - eForms software

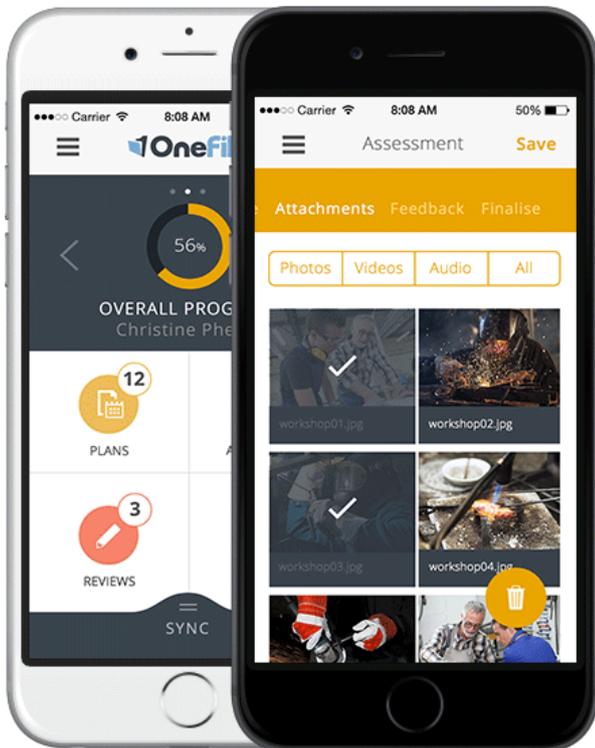

## **Interactive employer accounts**

A key focus of Trailblazers is to fully involve the employer in the learner's journey.

OneFile allows employers to access individual learner accounts, allowing employers to engage in direct assessments, monitoring, and reviewing of their employee's progress.

# Recording Trailblazer progress against the standard

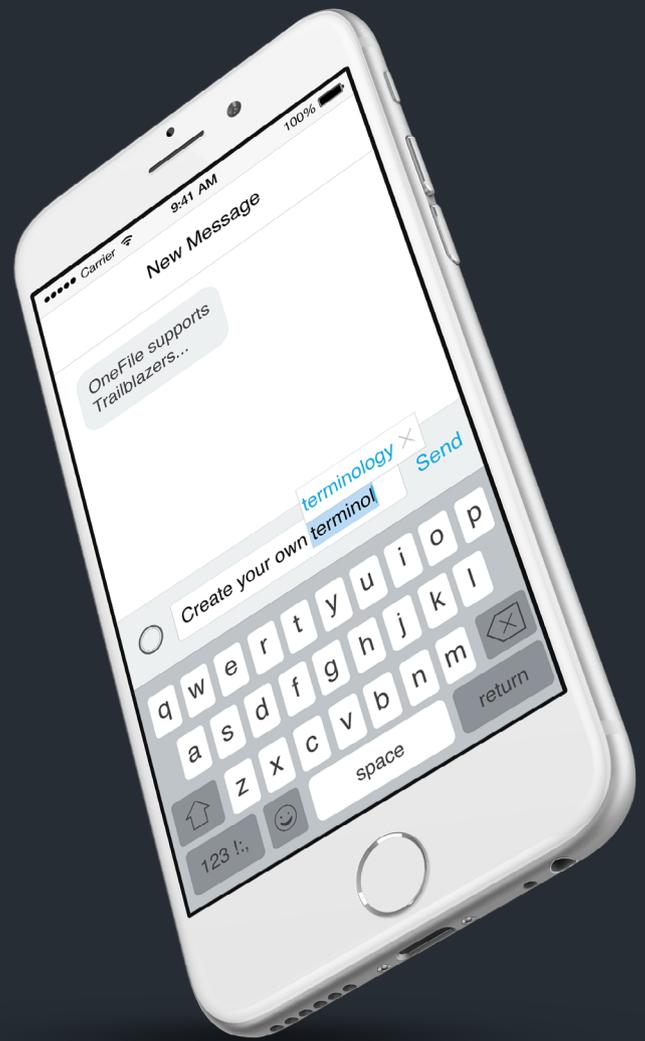

Trailblazer assessment plans, refer to the importance of recording and reviewing the learners progress against the standard. Within OneFile providers can utilise the review feature. This bespoke feature will allow centres to create different forms, to meet the requirements of each Trailblazer. The review feature also allows the review to be fully inclusive for not only the provider, but the learner and employer.

# Bespoke standards

Trailblazer assessment plans refer to 'recording the learning, development and assessment of learners prior to their end assessment'. These activities will provide the employer, provider and learner with an indication of suitability for final assessment.

With OneFile, learners can be linked to bespoke standards which are **tailored to the provider and also the employer**. Trailblazer standards focus primarily on end assessment, but providers and employers may still wish to record learner milestones, not only against the trailblazer standard but also any other elements such as Functional Skills. By tailoring the standards, it allows for **robust tracking** for funding and quality purposes.

## Customisable terminology

OneFile allows centres to customise their terminology within the software to reflect the changes in functionality, roles and responsibilities introduced by Trailblazers.

# eForms software

With OneFile eForms centres can devise their own sign up paperwork and create complex workflows for the implementation of Trailblazer standards. Workflows can include the learner, provider, employer and any other invested stakeholder.
